SOOS CREEK PUMP STATION D AND PIPELINE PROJECT

New regional wastewater facilities to serve the growing population

As part of its mission to protect public health and the environment, King County is responsible for conveying and treating wastewater collected by 34 cities and local sewer agencies in the central Puget Sound region.

King County's Wastewater Treatment Division collects and treats sewage from the Soos Creek Water and Sewer District, the cities of Kent and Black Diamond, and other jurisdictions in south King County. King County is upgrading and improving its regional wastewater facilities to provide capacity to support planned growth, consistent with the state's Growth Management Act.

King County to build new wastewater facilities

In 2002, King County signed an agreement with the Soos Creek Water and Sewer District committing itself to build and operate three regional pump stations and 10 miles of sewer line.

This project is the first step in fulfilling those commitments. It involves siting and building Pump Station D and about 20,000 feet of sewers from Pump Station D to a connection with the county's existing Southeast 277th Street Interceptor Sewer in Kent.

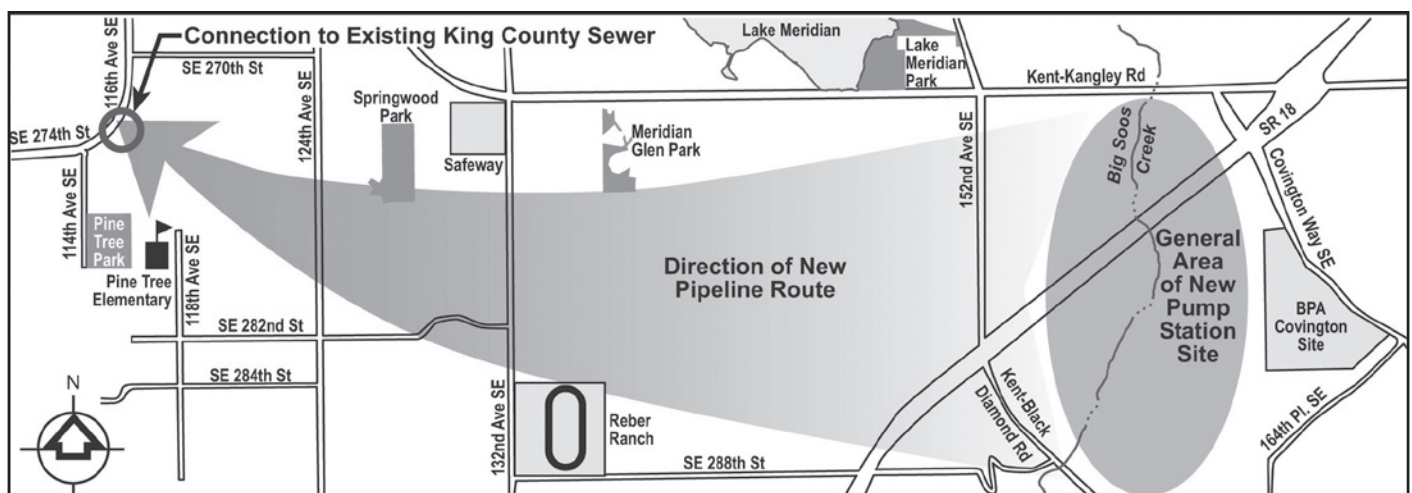

Pump Station D, to be built on about 1 acre, will have a capacity of 10 million to 26 million gallons per day. The new pipelines will range from 18 inches to 48 inches in diameter. These facilities will be built within the project area shown on the map.

Come to the community open house on Oct. 13!

6:30 – 8:30 p.m.
(presentation at 7 p.m.)

Covington Elementary School
17070 SE Wax Road
Covington, Washington

- Learn more about the project!
- Review the alternative pipeline corridors
- Review the evaluation criteria that will help to minimize community and environmental impacts.
- Share your ideas and questions
